[MD Sajib Mia](#)

Summary

Motivated and detail-oriented Junior Full Stack Developer with hands-on experience building responsive, scalable web applications using the MERN stack (MongoDB, Express.js, React, Node.js). Proficient in designing RESTful APIs, developing dynamic front-end interfaces, and integrating databases to deliver seamless end-to-end solutions. Passionate about writing clean, maintainable code and continuously expanding technical skills through real-world projects. A collaborative team player with strong problem-solving abilities, eager to contribute to innovative development teams and grow within a fast-paced environment.

Education

Shahjalal university of science and technology

2024

Physics

B.S.C

3.27

Analytical and detail-oriented Physics graduate from Shahjalal University of Science and Technology (SUST) with a CGPA of 3.27, bringing a strong foundation in mathematical reasoning, data analysis, and scientific problem-solving. Equipped with a rigorous academic background in classical mechanics, electromagnetism, quantum physics, and computational methods. Demonstrates excellent quantitative and analytical skills developed through laboratory work, research projects, and thesis-level investigation. A disciplined, curious, and fast-learning professional with the ability to break down complex problems and approach them with a systematic, evidence-based mindset. Eager to apply strong scientific thinking and technical aptitude in a research, data, or technology-driven role.

Projects

MERN Porfolio Backend project

A professional MERN portfolio backend project is a REST API server built with MongoDB, Express.js, React, and Node.js technologies that manages all dynamic data for a personal portfolio website. The backend handles authentication, database operations, API management, file uploads, and admin controls to make the portfolio fully manageable from the server side.

convert figma design into css and html

A Figma to HTML & CSS project involves converting a UI/UX design created in Figma into a fully responsive and functional website using HTML, CSS, and sometimes JavaScript. The goal is to transform static design layouts into clean, pixel-perfect frontend code while maintaining responsiveness, accessibility, and modern UI/UX standards.

User Login Logout and authentication using json-webtoken

A JWT authentication system is a secure user authentication and authorization mechanism built using JSON Web Token for managing user login sessions in modern web applications. It allows users to securely register, log in, access protected routes, and log out while maintaining stateless authentication between the client and server.

Weather app using raw javascript with fetaching api

Developed a responsive Weather Application using vanilla JavaScript by integrating real-time weather data from external APIs through asynchronous API fetching. Implemented dynamic UI updates, location-based weather search, temperature details, humidity, wind speed, and weather condition display with clean user experience and error handling. Built using HTML, CSS, and JavaScript while following modern frontend development practices and REST API integration techniques.
